About Kelda

What drives us to deliver a world of sustainable showering...

Founded in 2009, our mission has always been to revolutionise the showering experience whilst protecting our precious planet. Our patented Air-Powered™ technology, inspired by aerospace engineering, gives homeowners an immersive shower experience and significantly reducing water and energy usage.

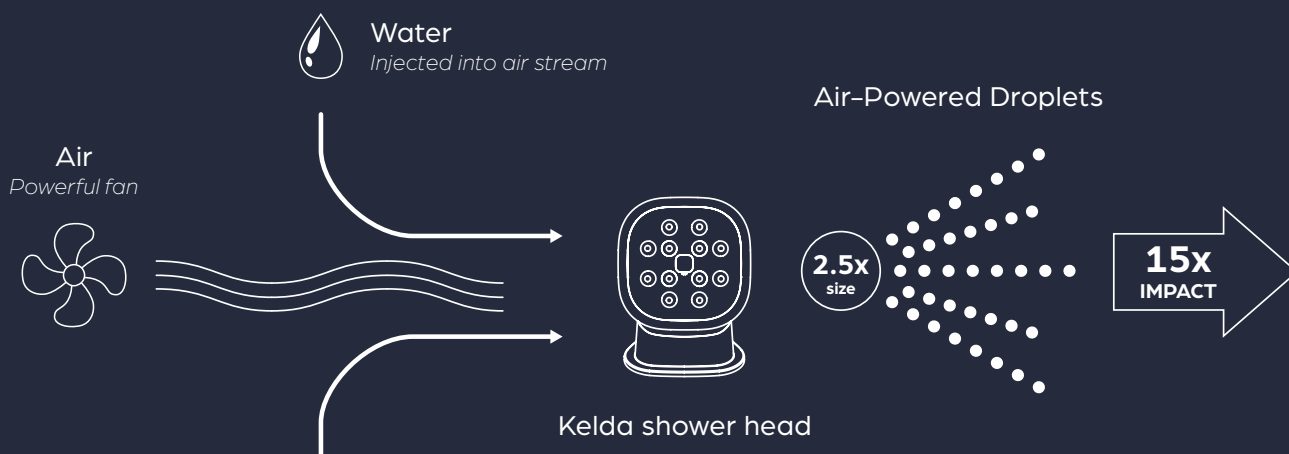

We have four collections of showers, including Deluxe, Concealed, Commercial and BubbleSpa®.

Air-Powered™ technology

Making less water feel like so much more

How do we do it...

Conventional aerated showers reduce water usage by drawing in air through small vents and mixing it with the water stream. Whilst this method saves water, the added air often has little to no positive impact—and can even compromise the overall shower experience.

Kelda's Air-Powered™ showers take a different approach. Using a high-performance fan, our technology propels water droplets with greater force, delivering a shower that feels just as powerful—if not more invigorating—than a traditional shower. And we do this using just 5 litres of water per minute (lpm), compared to the typical 8–15+ lpm.

The result? A superior shower experience with significant water and energy savings.

Air-Powered™ benefits

	Aerated Shower	Kelda Air-Powered™ Shower
Performance in low-pressure systems	Relies on a good flow to properly mix air and water and therefore often feels weaker than a typical shower.	Powerful integrated fan removes dependency on system water pressure, creating water droplets with 15x more impact.
Spray	Softer spray is not as effective for rinsing shampoo off thick hair.	Larger droplets (2.5x larger) maintain greater momentum, meaning effective rinsing even on the thickest of hair.
Cleaning	Small air vents are prone to limescale build-up, reducing the effectiveness off the shower. Smaller vents are more difficult to clean and require regular cleaning.	Kelda's easy-clean 12 nozzle head has been specifically designed to be limescale-resistant.

Air-Powered™ benefits

An overview of our industry widespread benefits

Whether you're a cost-conscious family, a business striving for efficiency and rapid return of investment, or a housebuilder committed to sustainable solutions, Kelda delivers smart, energy-saving technology designed to meet your goals.

From industry to industry, our innovation works for all!

Family benefits

A powerful shower doesn't have to mean high water bills. Kelda's Air-Powered technology delivers a powerful, refreshing shower while using less water. Enjoy a cost-effective, eco-friendly shower that's better for your family and the planet.

Benefits:

- ✓ **Lower Bills** – Save up to 50% on water and energy costs.
- ✓ **Eco-Friendly** – Reduce household water consumption without compromise.
- ✓ **Future-Proof** – Stay ahead of rising utility costs with smart savings.

Developer & landlord benefits

Kelda Showers are the only showers recognised in SAP 10 and RdSAP 10 at just 4.5 litres per minute. Our showers help developers and housing providers to reduce water demand, lower dwelling emission rates, and qualify for water infrastructure discounts on new water connections.

Benefits:

- ✓ **Attract Eco-Conscious Buyers** by improving EPC ratings
- ✓ **Meet Regulations** while reducing your build or retrofit costs
- ✓ **Qualify for Water Infrastructure Discounts** on new water connections

Commercial benefits

Kelda Showers help reduce utility bills while maintaining a premium showering experience for guests and customers. With lower running costs and improved sustainability, they're the smart choice for any high-usage environment.

Benefits:

- ✓ **Cut Operating Costs** – Slash water and heating expenses.
- ✓ **Fast Payback** – Reduced utility costs mean quicker return on investment.
- ✓ **Sustainability Credentials** – Meet environmental targets and achieve BREEAM compliance

Deluxe collection

Our premium Air-Powered™ shower collection

The Deluxe Shower Panel is a fully thermostatic, high efficiency system that enhances shower experience.

Product Features

- ~ Deluxe glass panel shower.
- ~ Water saving: 4-6lpm rather than the usual 8-15lpm.
- ~ Option between flex head and fixed head.
- ~ TMV2 Thermostatic mixing valve for precision temperature control*.
- ~ Four different colour sets available subject to minimum order quantity.

*Where valve included

How do we do it?

The science behind our BubbleSpa® magic

How do we do it...

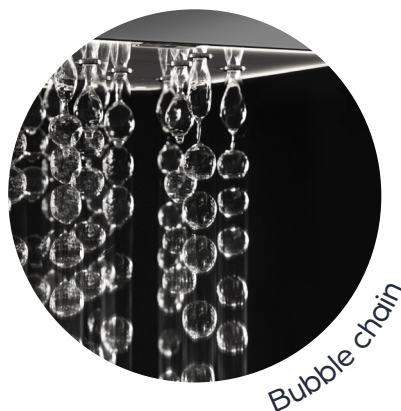

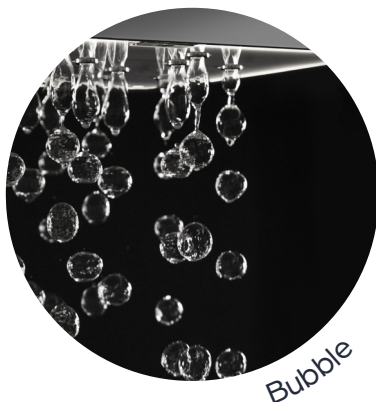

Advanced computational fluid dynamics was used to fine-tune the air-water mix for perfect bubble formation. Each 20mm bubble is designed to soothe the skin, cascading from sixteen nozzles to deliver Kelda's signature BubbleRain experience.

Bubble Tapping shower therapy

Kelda's one of a kind BubbleRain, inspired by Swedish massage techniques, revitalises skin and rinses the stress away. This helps:

- ~ Improve blood circulation
- ~ Strengthen immune system
- ~ Relax muscles, reducing stress on the body and mind.

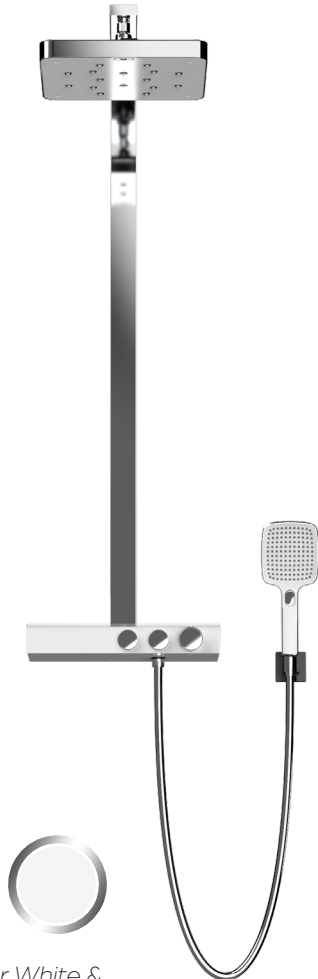

Three shower modes:

Glossary

B

BREEAM Compliance (Building Research Establishment Environmental Assessment Method) – a leading UK method for assessing, rating, and certifying the sustainability of buildings. BREEAM compliance indicates that a building meets specific environmental performance standards.

C

Ceiling Arm – plumbing fixture that extends from the ceiling to hold our Bubblespa® overhead shower.

Concealed – plumbing fixture or fitting installed within walls, providing a clean and minimalist appearance.

D

Dual Outlet – plumbing fixture that provides two separate water outlets, allowing water to supply both an overhead shower and handset.

F

Fascia – Front facing panel that protect and conceal the enclosed shower components.

Flow Sensor – a device that monitors the water flow rate to ensure efficient water management.

H

Handset – handheld shower head connected to a flexible hose, allowing users to direct water flow manually.

Handset Mount – bracket attached the wall that secures the shower handset when not in use.

L

Lpm (Litres per Minute) – measurement of the flow rate of water, indicating how many litres of water our showers use per minute. Important for assessing water efficiency and performance.

P

P23 Hub – central electronics control unit of our shower system.

Powder Coated – finishing process where a dry powder is applied electrostatically to a surface and then cured under heat. This creates a durable and corrosion-resistant finish.

R

RdSAP 10 (Reduced Data Standard Assessment Procedure 10) – a simplified version of SAP 10 used for assessing existing homes, where only limited data is available. It uses default values and assumptions for elements that can't be directly measured, allowing accredited assessors to produce Energy Performance Certificates (EPCs) efficiently. RdSAP 10 aligns with SAP 10 to ensure consistency between new-build and existing building energy assessments.

Riser Rail – vertical slider rail installed in a shower area that holds the handset. It allows the height of the handset to be adjusted to suit different users.

S

SAP 10 (Standard Assessment Procedure version 10) – the UK government's methodology for assessing the energy performance of residential buildings. SAP 10 underpins Building Regulations (specifically Part L) and is used to determine a dwelling's energy efficiency and Environmental Impact (EI) ratings.

Single Outlet – plumbing fixture that provides water flow to a single outlet, such as a tap or shower head.

SS (Stainless Steel) – corrosion-resistant steel alloy commonly used in bathroom fixtures and fittings due to its durability and aesthetic appeal.

SS304 (Stainless Steel 304) – grade of stainless steel known for its excellent corrosion resistance and formability. Widely used in bathroom and kitchen fixtures.

T

Tempered Glass – safety glass that has been heat-treated to increase its strength. If broken, it shatters into small, blunt pieces, reducing the risk of injury. Commonly used in shower enclosures and bathroom screens.

TF (Timed Flow) – water-saving mechanism that operates via a push-button and delivers water for a preset duration before automatically shutting off. This feature promotes water efficiency and reduces energy consumption in high-traffic environments.

TMV (Thermostatic Mixing Valve) – Valve that blends hot and cold water.

TMV2 (Thermostatic Mixing Valve Type 2) – valve designed for domestic and general public use. It blends hot and cold water to a safe temperature, preventing scalding. TMV2 valves comply with British Standards BS EN 1111 and BS EN 1287.

W

Wall Arm – fixture extending from the wall to support our Bubblespa® overhead shower.

WRAS (Water Regulations Advisory Scheme) – UK certification that ensures plumbing products and materials comply with the Water Supply (Water Fittings) Regulations and Bylaws. WRAS approval offers confidence to our customers that our product is safe and of high quality for use in the UK water supply.
